

# OCCUPATIONAL TRAINING

Occupational training not only provides inmates with livelihood skills but also serves as a crucial aspect of facilitating reintegration into society. It makes the inmates' time in prison more meaningful and aids their future assimilation into society. Through occupational training, inmates can acquire professional certifications, enhance their employability, and consequently reduce the risk of recidivism. Occupational training also helps alleviate the anxiety and uncertainty about the future, improving the psychological well-being of inmates and decreasing the likelihood of security incidents within the prison. This has a positive impact on maintaining prison order.

The occupational training initiatives undertaken by the Bade Minimum Security Prison are significant and valuable. They not only influence the personal growth and transformation of inmates but also have a positive effect on internal prison management and societal reintegration. This provides inmates with an opportunity to move towards a more positive future upon their release.

# FORKLIFT OPERATION TRAINING CLASS

The forklift operation training class aims to provide practical vocational skills for inmates to assist in their reintegration into society. In this course, participants will receive guidance from professional instructors to learn forklift operating techniques, cargo stacking and transportation methods, as well as machinery maintenance and upkeep. The training program offers both theoretical knowledge and hands-on experience to ensure that participants can proficiently master the professional skills.

# FIXED CRANE OPERATION TRAINING CLASS

The fixed crane operation training class is dedicated to providing inmates with the professional skills required in the workplace to help them rebuild their lives. In this course, participants will learn crane operating techniques, transportation principles, and safety precautions, as well as equipment maintenance and upkeep. The training program's expert instructors offer both theoretical knowledge and practical hands-on experience to ensure that participants can grasp the skills effectively.

# GAS TUNGSTEN ARC WELDING TRAINING CLASS

The gas tungsten arc welding course aims to provide practical vocational skills for inmates to assist in their reintegration into society. In this course, participants will receive guidance from professional instructors to learn the theory of welding, flat welding butt welding (S-F-01), etc. The training program offers both theoretical knowledge and hands-on experience to ensure that participants can proficiently master the professional skills.
